EBAR is relatively coarse scale data and not intended for all applications and analysis. Please see full disclaimer in metadata.

Ecosystem-based Automated Range (EBAR) Metadata

Species

National Scientific Name:	*Ardea herodias fannini* Chapman, 1901
Scientific Name Reference:	American Ornithologists' Union (AOU). 1957. The AOU check-list of North American birds, 5th ed. Port City Press, Inc., Baltimore, MD. 691 pp.
National English Name:	Great Blue Heron fannini subspecies
National French Name:	Grand Héron de la sous-espèce fannini
Element National ID:	164898
Element Global ID:	101455 (go to NatureServe Explorer)
Element Code:	ABNGA04011
Endemism Type:	N
Canadian COSEWIC Name:	
Canadian COSEWIC ID:	292

Rank/Status

Global Rank:	G5T4 (reviewed April 06, 2016)
National Rank (Canada):	N2N3B,N4N (reviewed 2011)
Subnational Ranks (Canada):	BC=S3B,S4N
National Rank (United States):	N2N3 (reviewed 1997)
Subnational Ranks (United States):	AK=S2S3
National Rank (Mexico):	None
Subnational Ranks (Mexico):	None
Canadian SARA Status:	Special Concern/Préoccupante (February 23, 2010)
Canadian COSEWIC Status:	Non-active/Nonactive
US ESA Status:	None

Range Map

Date Generated:	January 27, 2023
Version:	1.0
Stage:	Expert Reviewed (National)
Scope:	Canadian
Metadata:	Primary Species - *Ardea herodias fannini* Chapman, 1901 Input Records - 57 BC Non-sensitive Element Occurrences, 1229 BC Survey Observations, 86 iNaturalist.ca; Expert Reviews - 1 Anonymous
Comments:	None Please see spatial data for Ecoshape-level reviewer comments.
Disclaimer:	Please review our methods document before using EBAR. EBAR range data are relatively coarse scale and appropriate for screening and education purposes, but are not intended for all types of applications and analysis. The absence of data in any geographic areas does not necessarily mean that a species is not present. An ecoshape with a presence value does not necessarily mean that a species is present throughout the entire geographic area.
Presence Definitions:	(Please see Comments above for any exceptions) Present - the species is found within the ecoshape based on species observation data, Element Occurrences, Source Features, Canadian Federal Critical Habitat, or expert opinion. Presence Expected - expert opinion the species may be present, or the ecoshape overlapped with a range estimate or a habitat suitability model. Historical - all species occurrence data within the ecoshape contains observation data greater than 40 years old or an Element Occurrence (EO) that was ranked as Extirpated or Historical (EO Rank of H, H?, X or X?).
Usage Type Definitions:	(Please see Comments above for any exceptions) Breeding - the species is thought to breed within the ecoshape based on eBird Breeding and Behaviour Codes or expert opinion. Possible Breeding - the species is probably or possibly breeding within the ecoshape based on eBird, BBA or jurisdiction Breeding and Behaviour Codes, or on expert opinion.
Map Projection:	North America Albers Equal Area Conic (WKID 4269)
