

# Dipodomys ordii

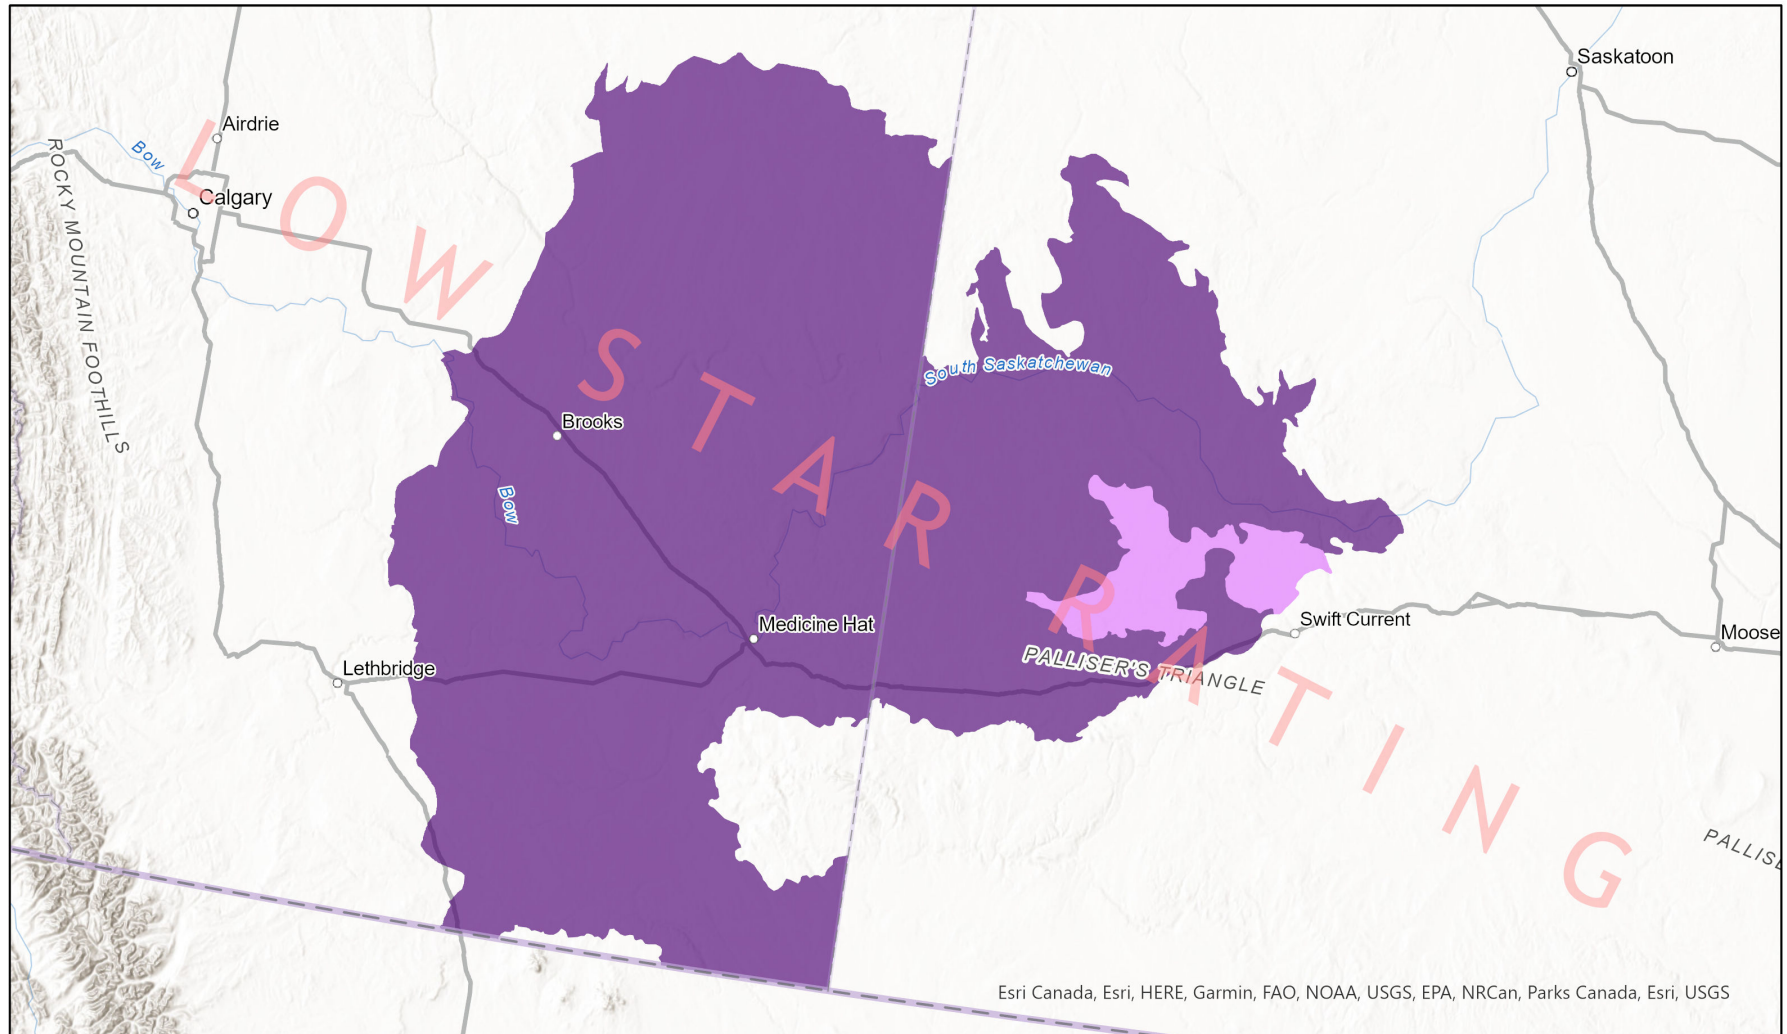

- Present
- Presence Expected
- Historical

## Ecosystem-based Automated Range (EBAR)

Date Generated: February 4, 2021; Version: 1.0; Stage: Expert Reviewed (Low Star Rating); Scope: Canadian

Synonyms Used: None

Esri Canada, Esri, HERE, Garmin, FAO, NOAA, USGS, EPA, NRCAN, Parks Canada, Esri, USGS

0 50 100 km

Input Records - 12 BISON, 14804 FWMS, 13 GBIF, 10 iDigBio, 10 iNaturalist, 32 SK Element Occurrences, 480 SK Source Feature Points, 30 SK Source Feature Polygons; Expert Reviews - 2 (average star rating = 2.0)

Map centre: 110.0183°W 50.4688°N

EBAR is relatively coarse scale data and not intended for all applications and analysis. Please see full disclaimer in metadata.

## Ecosystem-based Automated Range (EBAR) Metadata

---

### Species

|                           |   |
|---------------------------|---|
| National Scientific Name: | Dipodomys ordii                                       |
| National English Name:    | Ord's Kangaroo Rat                                    |
| National French Name:     | Rat kangourou d'Ord                                   |
| Element National ID:      | 167624  |
| Element Global ID:        | 103588 ( <a href="#">go to NatureServe Explorer</a> ) |
| Element Code:             | AMAFD03010  |
| Endemism Type:            | N   |

### Rank/Status

|                                    |  |
|------------------------------------|--|
| Global Rank:                       | G5 (reviewed April 04, 2016)   |
| National Rank (Canada):            | N2 (reviewed 2017)   |
| Subnational Ranks (Canada):        | AB=S1, SK=S2   |
| National Rank (United States):     | N5 (reviewed 1996)   |
| Subnational Ranks (United States): | AZ=S5, CA=SNR, CO=S5, ID=S4, KS=S5, MT=S5, ND=S4, NE=S5, NM=S5, NN=S5, NV=S5, OK=SNR, OR=S4, SD=S5, TX=S4, UT=S5, WA=S4, WY=S5 |
| National Rank (Mexico):            | None   |
| Subnational Ranks (Mexico):        | None   |
| Canadian SARA Status:              | Endangered/En voie de disparition (December 13, 2007)  |
| Canadian COSEWIC Status:           | Endangered (April 28, 2017)  |
| US ESA Status:                     | None   |

## Range Map

|                              |   |
|------------------------------|---|
| <b>Date Generated:</b>       | February 04, 2021   |
| <b>Version:</b>              | 1.0   |
| <b>Stage:</b>                | Expert Reviewed (Low Star Rating)   |
| <b>Scope:</b>                | Canadian  |
| <b>Metadata:</b>             | Primary Species Name - <i>Dipodomys ordii</i> (Wilson and Reeder, 1993)<br>Input Records - 12 BISON, 14804 FWMIS, 13 GBIF, 10 iDigBio, 10 iNaturalist, 32 SK Element Occurrences, 480 SK Source Feature Points, 30 SK Source Feature Polygons; Expert Reviews - 2 (average star rating = 2.0)   |
| <b>Comments:</b>             | This range has a low star rating.   |
| <b>Disclaimer:</b>           | Please review our <a href="#">methods document</a> before using EBAR.<br><br>EBAR range data are relatively coarse scale and appropriate for screening and education purposes, but are not intended for all types of applications and analysis.<br><br>The absence of data in any geographic areas does not necessarily mean that a species is not present.<br><br>An ecoshape with a presence value does not necessarily mean that a species is present throughout the entire geographic area.   |
| <b>Presence Definitions:</b> | Present - the species is found within the ecoshape based on species observation data, Element Occurrences, Source Features, Canadian Federal Critical Habitat, or expert opinion.<br><br>Presence Expected - expert opinion the species may be present, or the ecoshape overlapped with a range estimate or a habitat suitability model.<br><br>Historical - all species occurrence data within the ecoshape contains observation data greater than 40 years old or an Element Occurrence (EO) that was ranked as Extirpated or Historical (EO Rank of H, H?, X or X?). |
| <b>Map Projection:</b>       | North America Albers Equal Area Conic (WKID 4269)   |
