## Range Map

<b>Date Generated:</b>	December 29, 2020
<b>Version:</b>	1.0
<b>Stage:</b>	Expert Reviewed (Partially Reviewed)
<b>Scope:</b>	Canadian
<b>Metadata:</b>	Primary Species Name - <i>Olceclostera angelica</i> (Pohl et al., 2018) Input Records - 7 BAMONA, 12 GBIF, 7 iDigBio, 46 iNaturalist; Expert Reviews - 1 (average star rating = 4.0)
<b>Comments:</b>	This range has been partially reviewed. The following jurisdictions have been reviewed: Ontario.
<b>Disclaimer:</b>	Please review our <a href="#">methods document</a> before using EBAR.  EBAR range data are relatively coarse scale and appropriate for screening and education purposes, but are not intended for all types of applications and analysis.  The absence of data in any geographic areas does not necessarily mean that a species is not present.  An ecoshape with a presence value does not necessarily mean that a species is present throughout the entire geographic area.
<b>Presence Definitions:</b>	Present - the species is found within the ecoshape based on species observation data, Element Occurrences, Source Features, Canadian Federal Critical Habitat, or expert opinion.  Presence Expected - expert opinion the species may be present, or the ecoshape overlapped with a range estimate or a habitat suitability model.  Historical - all species occurrence data within the ecoshape contains observation data greater than 40 years old or an Element Occurrence (EO) that was ranked as Extirpated or Historical (EO Rank of H, H?, X or X?).
<b>Map Projection:</b>	North America Albers Equal Area Conic (WKID 4269)
