

Juncus caesariensis

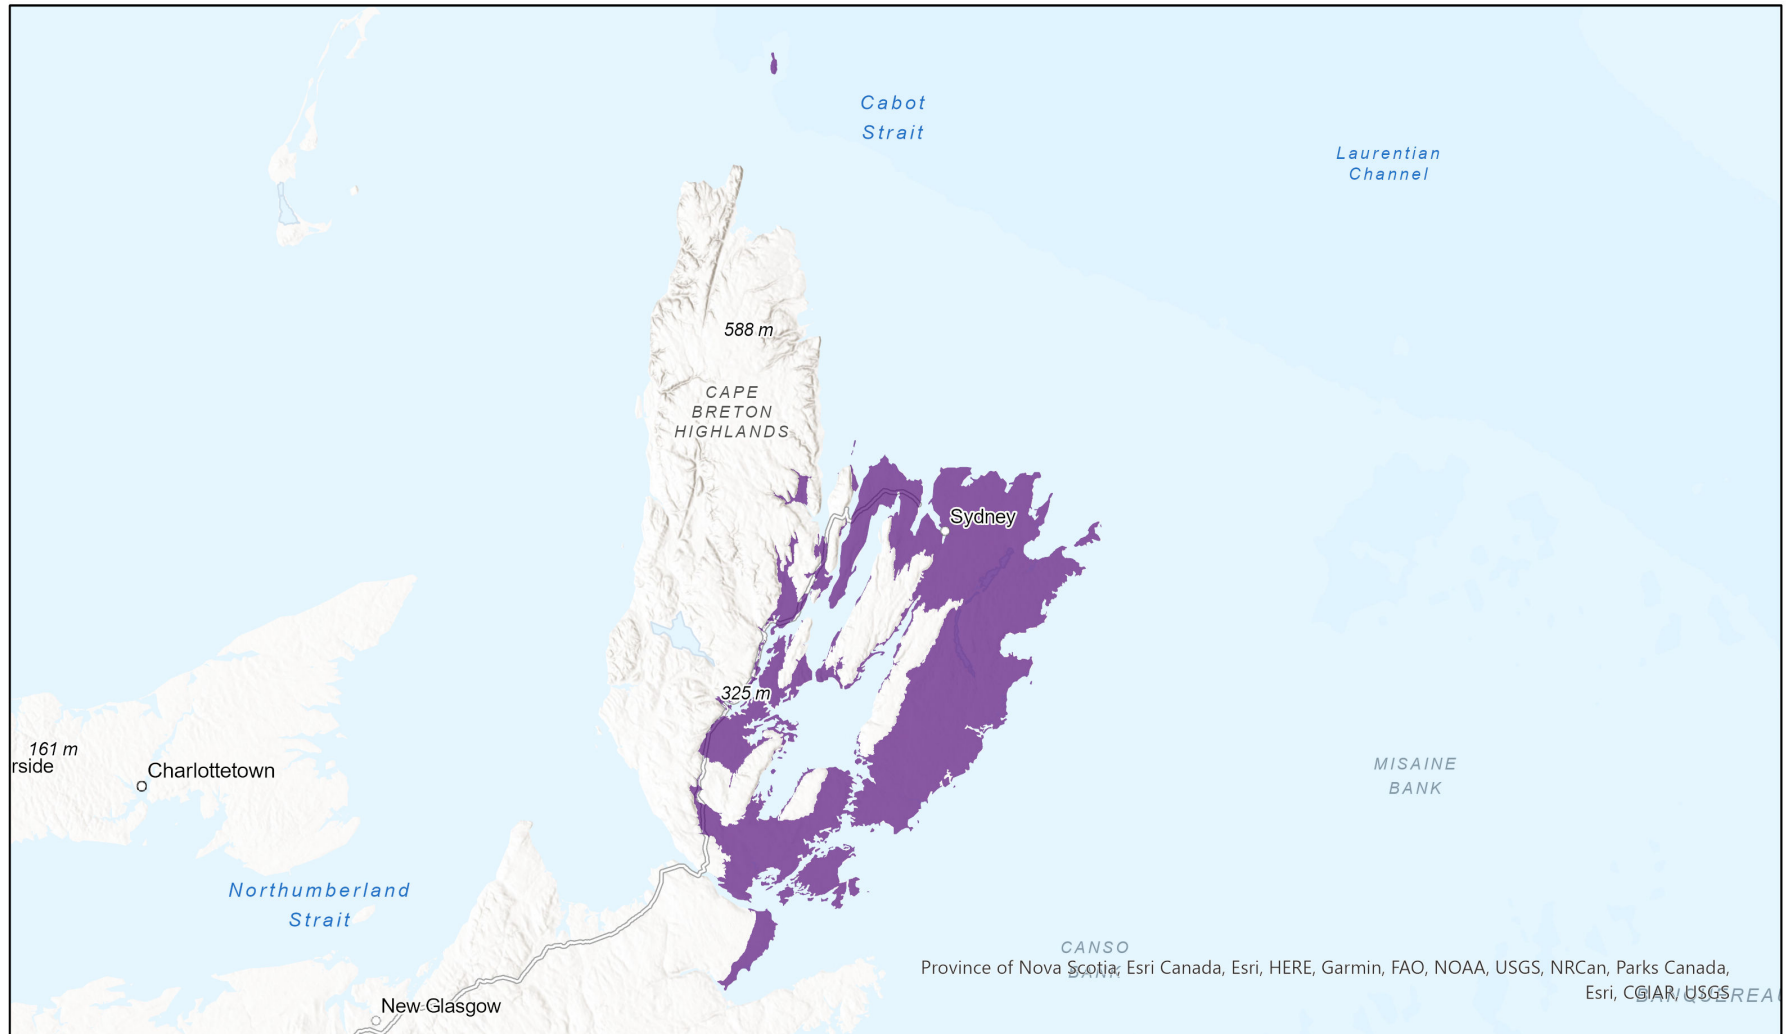

- Present
- Presence Expected
- Historical

Ecosystem-based Automated Range (EBAR)

Date Generated: September 2, 2022; Version: 1.0; Stage: Expert Reviewed (National); Scope: Canadian

Synonyms Used: None

Input Records - 486 ACCDC Observations, 1 BISON, 1 GBIF; Expert Reviews - 3 Anonymous

Map centre: 60.3438°W 46.196°N

EBAR is relatively coarse scale data and not intended for all applications and analysis. Please see full disclaimer in metadata.

Ecosystem-based Automated Range (EBAR) Metadata

Species

National Scientific Name:	<i>Juncus caesariensis</i> Coville
Scientific Name Reference:	Flora of North America Editorial Committee. 2000. Flora of North America north of Mexico. Vol. 22. Magnoliophyta: Alismatidae, Arecidae, Commelinidae (in part), and Zingiberidae. Oxford Univ. Press, New York. xxiii + 352 pp.
National English Name:	New Jersey Rush
National French Name:	Jonc du New Jersey
Element National ID:	226535
Element Global ID:	136247 (go to NatureServe Explorer)
Element Code:	PMJUN010K0
Endemism Type:	N

Rank/Status

Global Rank:	G2G3 (reviewed September 15, 2016)
National Rank (Canada):	N2 (reviewed 2017)
Subnational Ranks (Canada):	NS=S3
National Rank (United States):	N2
Subnational Ranks (United States):	MD=S1, NC=S1, NJ=S2, VA=S2
National Rank (Mexico):	None
Subnational Ranks (Mexico):	None
Canadian SARA Status:	Special Concern/Préoccupante (July 14, 2005)
Canadian COSEWIC Status:	Special Concern (May 01, 2004)
US ESA Status:	None

Range Map

Date Generated:	September 02, 2022
Version:	1.0
Stage:	Expert Reviewed (National)
Scope:	Canadian
Metadata:	Primary Species - <i>Juncus caesariensis</i> Coville Input Records - 486 ACCDC Observations, 1 BISON, 1 GBIF; Expert Reviews - 3 Anonymous
Comments:	Please see spatial data for reviewer comments.
Disclaimer:	<p>Please review our methods document before using EBAR.</p> <p>EBAR range data are relatively coarse scale and appropriate for screening and education purposes, but are not intended for all types of applications and analysis.</p> <p>The absence of data in any geographic areas does not necessarily mean that a species is not present.</p> <p>An ecoshape with a presence value does not necessarily mean that a species is present throughout the entire geographic area.</p>
Presence Definitions:	<p>Present - the species is found within the ecoshape based on species observation data, Element Occurrences, Source Features, Canadian Federal Critical Habitat, or expert opinion.</p> <p>Presence Expected - expert opinion the species may be present, or the ecoshape overlapped with a range estimate or a habitat suitability model.</p> <p>Historical - all species occurrence data within the ecoshape contains observation data greater than 40 years old or an Element Occurrence (EO) that was ranked as Extirpated or Historical (EO Rank of H, H?, X or X?).</p>
Usage Type Definitions:	<p>Breeding - the species is thought to breed within the ecoshape based on eBird Breeding and Behaviour Codes or expert opinion.</p> <p>Possible Breeding - the species is probably or possibly breeding within the ecoshape based on eBird Breeding and Behaviour Codes or expert opinion.</p> <p>Migration - the species is thought to migrate within the ecoshape based on eBird Breeding and Behaviour Codes or expert opinion.</p>
Map Projection:	North America Albers Equal Area Conic (WKID 4269)
