Species

National Scientific Name:	<i>Dalea villosa</i> var. <i>villosa</i>
National English Name:	Hairy Prairie-clover
National French Name:	Dalée velue
Element National ID:	247517
Element Global ID:	152726 (go to NatureServe Explorer)
Element Code:	PDFAB1A1Q2
Endemism Type:	N

Rank/Status

Global Rank:	G5T5 (reviewed August 21, 2002)
National Rank (Canada):	N2N3 (reviewed 2018)
Subnational Ranks (Canada):	MB=S2S3, SK=S2
National Rank (United States):	NNR
Subnational Ranks (United States):	CO=SNR, IA=SNR, KS=SNR, MI=SNR, MN=SNR, MO=SU, MT=S2, ND=SNR, NE=SNR, NM=SNR, OK=SNR, SD=SNR, TX=SNR, WI=S2, WY=S1
National Rank (Mexico):	None
Subnational Ranks (Mexico):	None
Canadian SARA Status:	None
Canadian COSEWIC Status:	None
US ESA Status:	None

Disclaimer:	Please review our methods document before using EBAR. EBAR range data are relatively coarse scale and appropriate for screening and education purposes, but are not intended for all types of applications and analysis. The absence of data in any geographic areas does not necessarily mean that a species is not present. An ecoshape with a presence value does not necessarily mean that a species is present throughout the entire geographic area.
Presence Definitions:	Present - the species is found within the ecoshape based on species observation data, Element Occurrences, Source Features, Canadian Federal Critical Habitat, or expert opinion. Presence Expected - expert opinion the species may be present, or the ecoshape overlapped with a range estimate or a habitat suitability model. Historical - all species occurrence data within the ecoshape contains observation data greater than 40 years old or an Element Occurrence (EO) that was ranked as Extirpated or Historical (EO Rank of H, H?, X or X?).
Map Projection:	North America Albers Equal Area Conic (WKID 4269)
