Species

National Scientific Name:	<i>Apodemia mormo pop. 2</i>
Scientific Name Reference:	Committee on the Status of Endangered Wildlife in Canada (COSEWIC) 2014. COSEWIC assessment results. May 2014. Online: http://www.cosewic.ca/index.php/en-ca/assessment-process
National English Name:	Mormon Metalmark - Prairie population
National French Name:	
Element National ID:	777490
Element Global ID:	777415 (go to NatureServe Explorer)
Element Code:	IILEPH7016
Endemism Type:	N

Rank/Status

Global Rank:	G5TUQ (reviewed May 15, 2006)
National Rank (Canada):	N2 (reviewed 2019)
Subnational Ranks (Canada):	SK=S2
National Rank (United States):	None

Comments:	Range spatially constrained to Saskatchewan to capture the COSEWIC population extent. Please see spatial data for reviewer comments.
Disclaimer:	Please review our methods document before using EBAR. EBAR range data are relatively coarse scale and appropriate for screening and education purposes, but are not intended for all types of applications and analysis. The absence of data in any geographic areas does not necessarily mean that a species is not present. An ecoshape with a presence value does not necessarily mean that a species is present throughout the entire geographic area.
Presence Definitions:	Present - the species is found within the ecoshape based on species observation data, Element Occurrences, Source Features, Canadian Federal Critical Habitat, or expert opinion. Presence Expected - expert opinion the species may be present, or the ecoshape overlapped with a range estimate or a habitat suitability model. Historical - all species occurrence data within the ecoshape contains observation data greater than 40 years old or an Element Occurrence (EO) that was ranked as Extirpated or Historical (EO Rank of H, H?, X or X?).
Map Projection:	North America Albers Equal Area Conic (WKID 4269)
