

# Contia tenuis

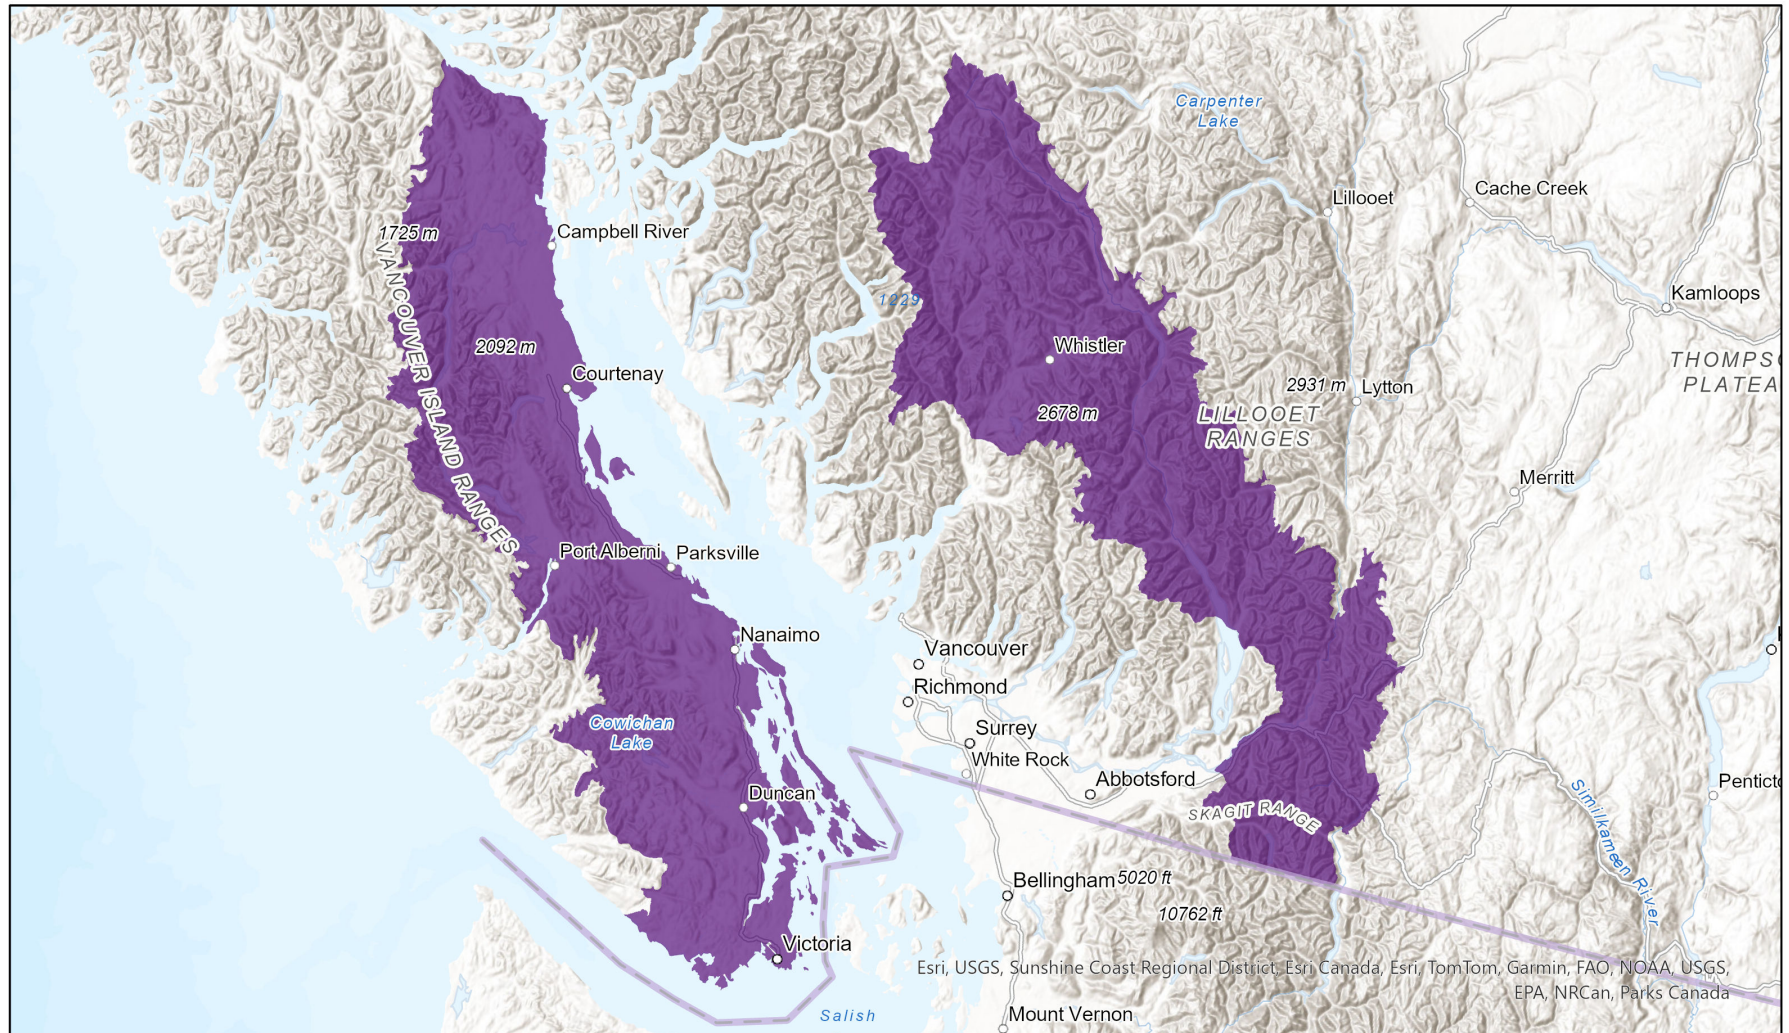

## Ecosystem-based Automated Range (EBAR)

Date Generated: January 26, 2022; Version: 1.0; Stage: Expert Reviewed (National); Scope: Canadian

Synonyms Used: None

- Present
- Presence Expected
- Historical

0 40 80 km

Input Records - 77 BC Incidental Observations, 20 BC Non-sensitive Element Occurrences, 539 BC Survey Observations, 3 BISON, 30 ECCC Critical Habitat, 20 GBIF, 10 iDigBio, 14 iNaturalist.ca, 8 iNaturalist.org, 6 VertNet; Expert Reviews - 1 Anonymous

Map centre: 123.4176° W 49.6022° N

EBAR is relatively coarse scale data and not intended for all applications and analysis. Please see full disclaimer in metadata.

## Ecosystem-based Automated Range (EBAR) Metadata

---

### Species

National Scientific Name:	<i>Contia tenuis</i> (Baird and Girard, 1852)
Scientific Name Reference:	Crother, B. I. (editor). 2017. Scientific and standard English names of amphibians and reptiles of North America north of Mexico, with comments regarding confidence in our understanding. 8th edition. SSAR Herpetological Circular 43:1-104. [Updates in SSAR North American Species Names Database at: <a href="https://ssarherps.org/cndb">https://ssarherps.org/cndb</a> ]
National English Name:	Common Sharp-tailed Snake
National French Name:	Couleuvre à queue fine; Couleuvre à queue pointue
Element National ID:	849092
Element Global ID:	843987 ( <a href="#">go to NatureServe Explorer</a> )
Element Code:	ARADB09010
Endemism Type:	N
Canadian COSEWIC Name:	
Canadian COSEWIC ID:	

## Rank/Status

Global Rank:	G5 (reviewed February 02, 2016)
National Rank (Canada):	N1N2 (reviewed 2022)
Subnational Ranks (Canada):	BC=S1S2
National Rank (United States):	N5 (reviewed 2010)
Subnational Ranks (United States):	CA=SNR, OR=S4, WA=S3
National Rank (Mexico):	None
Subnational Ranks (Mexico):	None
Canadian SARA Status:	Endangered/En voie de disparition (June 05, 2003)
Canadian COSEWIC Status:	None
US ESA Status:	None

## Range Map

Date Generated:	January 26, 2022
Version:	1.0
Stage:	Expert Reviewed (National)
Scope:	Canadian
Metadata:	<p>Primary Species Name - <i>Contia tenuis</i> (Baird and Girard, 1852)</p> <p>Input Records - 77 BC Incidental Observations, 20 BC Non-sensitive Element Occurrences, 539 BC Survey Observations, 3 BISON, 30 ECCC Critical Habitat, 20 GBIF, 10 iDigBio, 14 iNaturalist.ca, 8 iNaturalist.org, 6 VertNet; Expert Reviews - 1 Anonymous</p>
Comments:	<p>None</p> <p><a href="#">Please see spatial data for Ecoshape-level reviewer comments.</a></p>
Disclaimer:	<p>Please review our <a href="#">methods document</a> before using EBAR.</p> <p>EBAR range data are relatively coarse scale and appropriate for screening and education purposes, but are not intended for all types of applications and analysis.</p> <p>The absence of data in any geographic areas does not necessarily mean that a species is not present.</p> <p>An ecoshape with a presence value does not necessarily mean that a species is present throughout the entire geographic area.</p>
Presence Definitions:	<p>(Please see Comments above for any exceptions)</p> <p>Present - the species is found within the ecoshape based on species observation data, Element Occurrences, Source Features, Canadian Federal Critical Habitat, or expert opinion.</p> <p>Presence Expected - expert opinion the species may be present, or the ecoshape overlapped with a range estimate or a habitat suitability model.</p> <p>Historical - all species occurrence data within the ecoshape contains observation data greater than 40 years old or an Element Occurrence (EO) that was ranked as Extirpated or Historical (EO Rank of H, H?, X or X?).</p>
Usage Type Definitions:	<p>(Please see Comments above for any exceptions)</p> <p>Breeding - the species is thought to breed within the ecoshape based on eBird Breeding and Behaviour Codes or expert opinion.</p> <p>Possible Breeding - the species is probably or possibly breeding within the ecoshape based on eBird, BBA or jurisdiction Breeding and Behaviour Codes, or on expert opinion.</p>
Map Projection:	North America Albers Equal Area Conic (WKID 4269)
