EBAR is relatively coarse scale data and not intended for all applications and analysis. Please see full disclaimer in metadata.

Ecosystem-based Automated Range (EBAR) Metadata

Species

National Scientific Name: Campsomeris pilipes (Saussure, 1858)

Scientific Name Reference: Poole, R. W., and P. Gentili (eds.). 1996. Nomina Insecta Nearctica: a checklist of the insects of North America. Volume

2 (Hymenoptera, Mecoptera, Megaloptera, Neuroptera, Raphidioptera, Trichoptera). Entomological Information

Services, Rockville, MD.

National English Name: Yellow Scarab Hunter Wasp

National French Name: Scolie dorée

Element National ID: 870089

Element Global ID: 869425 (go to NatureServe Explorer)

Element Code: IIHYMBB010

Endemism Type: N

Canadian COSEWIC Name: Dielis pilipes

Canadian COSEWIC ID: 1446

Rank/Status

Global Rank: GNR

National Rank (Canada): NNR

Subnational Ranks (Canada): BC=S1S2

National Rank (United States): NNR

Subnational Ranks (United States): ID=SNR

National Rank (Mexico): None

Subnational Ranks (Mexico): None

Canadian SARA Status: Special Concern/Préoccupante (February 03, 2023)

Canadian COSEWIC Status: Special Concern (November 01, 2018)

US ESA Status: None

Range Map

Date Generated: August 30, 2023

Version: 1.0

Stage: Expert Reviewed (National)

Scope: Canadian

Metadata: Primary Species - Campsomeris pilipes (Saussure, 1858); Synonyms - Dielis pilipes (Saussure, 1858)

Input Records - 1 Avis, pers. comm., 23 iNaturalist.ca, 19 iNaturalist.org; Expert Reviews - Joel Gibson

Comments: None

Please see spatial data for Ecoshape-level reviewer comments.

Disclaimer: Please review our <u>methods document</u> before using EBAR.

EBAR range data are relatively coarse scale and appropriate for screening and education purposes, but are not intended

for all types of applications and analysis.

The absence of data in any geographic areas does not necessarily mean that a species is not present.

An ecoshape with a presence value does not necessarily mean that a species is present throughout the entire geographic

area.

Presence Definitions: (Please see Comments above for any exceptions)

Present - the species is found within the ecoshape based on species observation data, Element Occurrences, Source

Features, Canadian Federal Critical Habitat, or expert opinion.

Presence Expected - expert opinion the species may be present, or the ecoshape overlapped with a range estimate or a

habitat suitability model.

Historical - all species occurrence data within the ecoshape contains observation data greater than 40 years old or an

Element Occurrence (EO) that was ranked as Extirpated or Historical (EO Rank of H, H?, X or X?).

Usage Type Definitions: (Please see Comments above for any exceptions)

Breeding - the species is thought to breed within the ecoshape based on eBird Breeding and Behaviour Codes or expert

opinion.

Possible Breeding - the species is probably or possibly breeding within the ecoshape based on eBird, BBA or jurisdiction

Breeding and Behaviour Codes, or on expert opinion.
